

Power supply

The diagram illustrates a power supply circuit. A green line represents the input power, which is labeled +5V. This input is connected to the VIN pin (pin 1) of the voltage converter U1, BU33SD5WG-TR. The SW_SPDT switch (pin 2) is also connected to the input line. The SHDN pin (pin 3) is connected to GND. The output of the converter, VOUT (pin 5), is connected to the +3.3V output line. A capacitor C18 (1uF) is connected between the output and GND. Another capacitor C17 (1uF) is connected between the input line and GND. The GND symbol is shown at the bottom of the circuit.

The diagram shows a 20-pin SWD connector J2. The pins are arranged in two rows of 10 pins each. The top row (pins 1-10) is connected to +3.3V and the bottom row (pins 11-20) is connected to GND. The pins are labeled as follows:

- Pin 1: +3.3V
- Pin 2: +3.3V
- Pin 3: TRST
- Pin 4: TRST
- Pin 5: TDI
- Pin 6: TDI
- Pin 7: SWDIO
- Pin 8: SWDIO
- Pin 9: SWDCK
- Pin 10: SWDCK
- Pin 11: GND
- Pin 12: GND
- Pin 13: TDO
- Pin 14: TDO
- Pin 15: NRST
- Pin 16: NRST
- Pin 17: GND
- Pin 18: GND
- Pin 19: GND
- Pin 20: GND

Resistors R4, R5, and R6 are 10k ohms. R4 is connected between pins 3 and 4. R5 is connected between pins 5 and 6. R6 is connected between pins 7 and 8.

port USB

[illegible]

IO connector

Diagram of an IO connector (J3) with two pins. The connector is labeled "J3" and "Conn_01x02". The pins are labeled "1" and "2". Pin 1 is connected to "GND" and Pin 2 is connected to "+5V". The connector is labeled "alim" above it.

Mounting pad

The diagram illustrates a vertical mounting pad layout. A central vertical green line represents the main pad. Four red circular pads, labeled H1, H2, H3, and H4 from top to bottom, are connected to this central line. Each red pad is also labeled 'MountingHole_Pad'. At the bottom of the central green line, there is a green triangle pointing downwards, labeled 'GND'.
